DEMO-201 · Recorded use

Monday, 2 November 2026 · Active computer lab · 50 seats

180 min Recorded booking union Includes time during outage	**420 min** Common usable time 09:00-12:00 and 13:00-17:00	**90 min** Maintenance union All within common usable time
330 min Usable after maintenance Common time minus outage	**120 min** Booked within available 60 min booked during outage	**36%** Utilization within available 120 / 330 min, rounded

Maintenance clash	SYN-101 overlaps the outage from 10:00 to 11:00 on this date. This weekly class has three overlapping occurrences; resolve before publication.
Unverified OD use	OD #77 has no time. Monday gaps are unverified, and publication remains blocked while this record may intersect maintenance.

Bookings and maintenance

09:30-11:00 Maintenance #18	Electrical inspection · 2-16 November · Mondays. Overlaps SYN-101 from 10:00 to 11:00.
10:00-11:15 SYN-101	Systems laboratory · Primary room · One canonical class. Maintenance clash: 60 minutes.
11:15-12:00 SYN-102	Programming laboratory · Primary room. No maintenance overlap.
13:00-14:00 Complete OD reservation	Weekly physical booking. Counts even while verification is pending.

Overlaps count once in booking/maintenance unions. Every room role reserves its full stored interval. Unknown OD time contributes no guessed minutes.

Potential gaps

Unverified booking data · Computer lab · At least 30 minutes · Active room

09:00-09:30 30 minutes	Ends at the start of maintenance. Unverified because OD #77 has no time.
14:00-17:00 180 minutes	After the complete OD booking. Unverified because OD #77 has no time.

12:00-13:00 is outside the common usable windows. Gaps do not bridge breaks or maintenance.

Context and checks

This date projects recorded weekly bookings and effective ranges. Holidays, single-date class changes and unrecorded use are not modeled. Existing published routines remain unchanged.

The room is active. Cancelling maintenance would remove its block while preserving history. An inactive room would have no assignable gaps.

A day fully closed by maintenance shows “Closed”; a day without common windows shows “Not configured.” Neither reports a percentage with a zero denominator.

Design boundary

This is an explicitly composed two-page print design for owner review, generated separately from the interactive HTML sketch. Production print must still prove dynamic continuation, context on every page and correct behavior after interaction. See ROM-01C AC-09.

Synthetic proposal · 29 October 2026 · Implementation approval pending. Figures and booking labels match the date-view sketch.
